Light Magenta	\$36.00	\$39.99	\$0.62	

This document summarizes the average ink used by the printers.
All prices are estimated street prices as of February 2005. Fully printed area.

- "Ink cost (cartridge + printhead)" is the result of adding up black ink + black printhead cost and color ink + color printhead cost.
- "Prints/cartridge" represents the average number of prints that can be printed with one set of 6 inks.
- "Ink + printhead price per ml" considers the price of the cartridges when purchasing multipack option (capacity is 69 ml in K, M, L, Y cartridges and 28 ml in C, M cartridges) and the price of the printheads (estimated printhead life is 400 ml).
See formula: Ink price / ml = cartridge price / cartridge capacity + printhead price / printhead estimated life.
